

The connector popup window lets you adjust the setting of the transition

Once you have set the wire, an option screen will be displayed.

On the connector menu, explore the transition effect, the easing method and the duration of transition.

Exit the popup by pressing Esc or clicking on any other area. You can see the popup again by clicking on either the originating or ending points. To remove a connection, drag the wire off the target artboard.

You can copy and paste objects across artboards. The object is copied and pasted along with its interaction. You can also copy and paste an interaction alone. Copy an object, right-click another object and then select Paste Interaction. Only the interaction is pasted.

The wire need not necessarily move only from left to right. You can also a connect a previous artboard to it dragging it over and across other artboards. Or you also select previous artboard in the Target option of the popup menu. From this menu, you can also none to remove any linkages. An artboard can have multiple links also. So from the Homepage screen, you can have one connector to the Search Result screen and you can also create another screen for an headline displayed on the Homepage with a link from that text box.

Create wire interactions for every screen connecting to the next screen. So from Login button to Homepage, from Search Box to Search Term and

PRO TIP:

Use the Dissolve transition when designing for web.
