

Download Adobe XD for mobile from iTunes or Play store. Open Adobe Creative Cloud on desktop and click on 'Open Folder'. Copy the XD file into the this folder. Wait till the Creative Cloud syncs. Open the XD app, sign in and go to XD Documents tab (you will be here by default). Click on the file and wait for it to open. You can preview it here just as you did on the desktop. Hold long press on any artboard to see the menu options. If you want to make any changes, open the XD file on desktop, make the changes and replace the old file in the creative cloud folder. Again for the sync to be completed and preview the new file.

If you are using Mac, this is even easier. You can actually view and edit it in real time! Connect your mobile device using USB to your computer running XD, edit your designs and prototypes on the desktop, and preview them in real time on connected mobile devices. When you open Adobe XD on your phone, the selected artboard will be displayed.

As simple as that! Android users crying foul? We hear you - Adobe does too - they are working on Real-time Preview via Wi-Fi for XD on Windows 10.

If you are satisfied, share this file with your collaborators and give yourself a well deserved pat on the back.
