

the password field and provide a new password as per the rules. You can remove the set password by unchecking the Require password checkbox. What will happen if you forgot the password after sharing the link? You can easily set a new password and select the update button. The system will not email the password via forget password option like in the case of web-based applications.

You should select Update button and select New Link option to generate a fresh shareable link after performing each operation. The link can be messaged across the email, messaging platforms like Skype, Slack and others. It is not practically possible to update links with passwords if you had created public prototype URLs using Adobe XD 6 and earlier versions. You need to open the links using Adobe XD 7 and update them with the relevant password as per the above steps.

Deleting published prototypes

Adobe XD includes an option named Manage Published Links (Select ↑ button) using which you can delete shared links. As soon as you select the link, the Adobe Creative Cloud website opens and the prototype can be deleted by clicking

Adobe XD helps you to manage published links in a smart way

the Delete icon from the shared links section. The system will prompt you to delete and upon confirmation, the relevant prototype will be deleted.

Understanding the review process

The status of the shared prototypes can be monitored by the authors, who will receive an automated notification when comments are added by the members. The prototype can be updated in real-time by selecting the comment icon located on the upper right corner. If you wish to seek clarifications regarding the comment, you can do so by selecting comments reply functionality. The Resolve Comment option is used to resolve and settle a comment. Even though the resolved comments don't appear on the prototype, you can locate them by clicking View Resolved Comments option. It is
