

possible to create a draggable pinned comment by typing the content and selecting Pin to Artboard option. You will view unique numbers in the comments panel using which reviewers can identify the nature of the comment.

Working with design specs

The Design Specs (Beta) functionality included with Adobe XD helps you to share design specific properties of the prototype files among your team members. This includes core information such as height, width, size, alignment, colors, typography. You can also share relative spacing between two icons and elements. It is possible to view the sequence and detailed specifications of each artboards with vital parameters such as colors, measurements and character styles.

To perform the design specs publishing task, you should navigate and open the Adobe XD file that you would like to share. Select Publish Design Specs BETA option by selecting the UP (↑) icon. You need to provide the required title and select Create Public Link button. Adobe XD is capable of publishing the design specifications from 0.5x to 2x measurement after the completion of the process.

You can then either open or copy the link by selecting the required option from the bottom. It is advisable to open the design specs and verify before sharing to avoid round trips. You can update the contents of the existing link by

Verify measurement values easily

selecting Update Link option. Your team member can view the design specs upon refreshing the link. Moreover, you can navigate to the link sent by the designer to carry out the inspection of the design specs.

You can make use of the design specs published from Adobe XD using which you can inspect the flows, measurements and styles. The beta release of the design specs is an attempt to improve the communication between designers and developers. It is possible to generate a shareable URL in Adobe XD using which reviewers can verify the flows, styles and other related parameters. Mobile browsers are not supported and hence you can't open the links using smartphones and tablets.

As a developer, you can view the sequence and artboards flow in the UX flow view using which you can access the number of screens pending to
