

Conclusion

If you are working in a team, you should share design specifications of prototypes between members to facilitate improvements. Even if you are a team leader, feedback provided by other members would prove valuable in the long run. And sometimes, you will be required to share the file to a third-party reviewer for expert opinion. Another advantage of making full use of Adobe XD's collaborative features is that you may not be able to identify a particular problem with the prototype that your team members can. This might be due to lack of expertise

Adobe XD enables you to swap screens easily

in a particular area or even plain and simple oversight on your part. Regardless of which reason it is, the collaborative options and the importance of feedback is not lost on anyone.

Hence, you should make use of all the available methods with Adobe XD for gathering feedback from reviewers including protecting the files with password for security. We would recommend you to refer to the official documentation available at <https://dgit.in/axd-help> for more information and updates. You can also find several full length tutorials and courses online. Since the Adobe ecosystem is quite popular among developers and designers, there is no lack of helpful material out there. Depending on what you are looking for, you might even be able to find an entire step-by-step guide to your own dream project. The possibilities are endless! **d**
