

A plethora of software are required to successfully build and flash a custom to your device. If a single one is not installed properly, the entire process will fail. You did not imagine that this would be easy, did you?

measures. This is a general advice regardless of what security pattern you use for your device.

And most importantly, you do not want to run out of power in between the process of flashing your custom ROM. So make sure you plug your phone into a source of power to make sure you manage to flash that ROM all the way. **d**
