

Viper4Android

Viper4Android is by far the most advanced music functionality mod available for Android users. It helps users gain extended audio functionality for their device. This mod actually puts the power to control the device's speaker, audio performance and even the Bluetooth output into your hands. The clarity increase is what makes this mod so popular, thanks to XHiFi technology as well as ViPER clarity.

Emoji One

Emojis are a huge deal for everyone with devices (well, almost everyone). We use emojis for everyday conversations almost all the time (and are half tempted to insert one right here right now). Emoji One is a Magisk mod that allows you to get access to the latest updates of re-designed emojis. This means bye-bye to the stock emojis that your phone came with.

Dolby Atmos

If you are an audiophile, then choosing this mod should be a no-brainer for you. The sound technology that comes with the name Dolby Atmos is unparalleled. Their sound technology has been utilised in some Lenovo devices, but with the mod you can now enjoy their technology on devices that don't officially support it too. The moment you install the mod, noticeable improvements will occur in the sound output. While there might be a number of other audio mods out there, this one might just be the perfect one for you. You will not know until you try.

Tethering Enabler

A number of manufacturers disable the tethering option

Dolby Atmos needs no introduction, and this module can bring it to your phone
