

done correctly. Download an app named Root Checker from Google Play and check that your phone is successfully rooted.

There are 3 parts to rooting a phone- unlocking bootloader, installing custom recovery and gaining root access. You need to unlock bootloader to gain access to the internal memory of the device. Post this, you can install a custom recovery which gives you a lot of functionality like memory wipes, create backups and install flashable zips. Lastly, you flash SuperSU or Magisk zip for the root.

Install Fastboot and ADB binaries on your PC. Now, go to **Settings** on your phone, open **About Phone** and tap on **Build number** 7 times. This opens up Developer options which are available in Settings. Open them and enable USB Debugging, OEM unlocking and Advanced Reboot. Take a backup of your phone at this time because soon, your entire phone data will be wiped clean.

Switch off the phone and reboot it in Fastboot mode by pressing power off and volume up button. The phone will display “fastboot” text indicating that it has successfully entered fastboot mode. Connect the phone to the PC via USB cable and open up command prompt and type

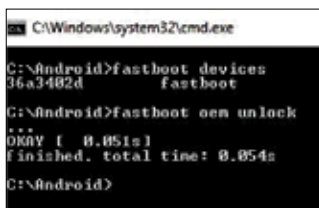

- `fastboot devices`

You should see the list of connected devices, if not, then the drivers are not properly installed. Install them again and try it. If you see your device listed, type in

- `fastboot oem unlock`

On your phone, use the volume button to select the Yes option on the Bootloader warning page. The phone will automatically reboot. Download TWRP and Magisk or SuperSU. Place Magisk or SuperSU zip file on your device and TWRP img on the PC. Reboot the device in fastboot mode and in command prompt, type

- `fastboot flash recovery (file name).img`

```

C:\Windows\system32\cmd.exe

C:\Android>fastboot devices
36a3402d          fastboot

C:\Android>fastboot oem unlock

***
OKAY [ 0.051s ]
finished. total time: 0.054s

C:\Android>
  
```

The initial steps

Once the flash is completed, manually boot the device into recovery by pressing the volume button for a couple of times till you see recovery in red at the top and then hit the power button to reboot. This will launch
