

This will delete an entire folder.

- `package _extract _dir("zip _directory","/directory _on _phone")`

Your ROM contains a bunch of zip files which are to be extracted. This command does exactly that. It extracts the file given in the path specified in parenthesis.

- `set _perm(uid, gid, permissions, "file _name _with _address")`

Flashing a ROM is a fairly simple process

When you download any app, it asks you for permissions like (depending on the app functionality) accessing your contacts, sms, gallery etc. This command provides permissions to various files. A very useful command since some permissions are restricted to a few files only – like formatting the memory. Without going into the details, uid refers to UserID and gid refers to GroupID. The permissions fall into 2 categories, rw-r-r or rw-x-rw-rw, and are given in integer format. The first section, e.g. “rwx” is the
