

permission set given to the “Owner” of the file, the second section e.g. “rw” is the permission set given to the “Group”, and the third section, “rw” is the permission given to “Global”. Two of the most important permissions you will need are 0644 which will always be given to an apk and 0755 which will always be given to a folder.

- `set_perm_recursive(UID, GID, perm_directory, perm_files, "directory_name")`

Similar to the earlier command, this one gives permissions to the entire directory. **d**
