

together another Android ROM for the OnePlus X. You are now part of a select few individuals from across the world who have managed to build their own Android OS from scratch. We hope you now start taking up new projects which involve making new build, adding features to existing builds or taking up the mantle and coming up with your very own AOSP flavour for your choice of phone. This will be an uphill task that involves finding the requisite kernel files and drivers for the device. With Android the scope of adding new features is vast and we encourage you to spread your wings and build innovative features. Who knows, even Google might include it in the next Android version if it is good enough. **d**
