

Start the build

Time to start building! Now, type:

- `croot`
- `brunch oneplus2`

The build should begin.

Install the build

Assuming the build completed without errors (it will be obvious when it finishes), type the following in the terminal window the build ran in:

- `cd $OUT`

There you'll find all the files that were created. The two files of more interest are:

- `recovery.img`, which is the LineageOS recovery image.
- `lineage-15.1-20180520-UNOFFICIAL-oneplus2.zip`, which is the LineageOS installer package.

Success! So... what's next?

You've done it! Welcome to the elite club of self-builders. Now you have a ROM in your hand exclusively tailored to your tastes for the OnePlus 2. We hope you had fun on the way and learnt something new as well!

To get assistance

#LineageOS-dev - A helpful, real-time chat room (or "channel"), on the Freenode IRC network.

Tip: Special boot modes

- Recovery: With the device powered off, hold Volume Down + Power.
- Download: With the device powered off, hold Volume Up + Power.

Find help online

You can find assistance with LineageOS on our subreddit, or in #LineageOS on freenode. [d](#)
