

These codes are non-invasive so that if your device does not support these mods, there will be no effect on the ROM. You can also research for other codes to be added to csc online.

Emperor Tweaks (God Mode)

You could choose to use a tweak or mod built by another developer and freely available on a forum like XDA. Emperor Tweaks are build.prop tweaks. Build.prop is an Android's system file that it utilises commonly for its own internal running. The Emperor Tweaks made to these files help maximise battery performance as well as efficiency.

Emperor Tweaks provides:

- Better RAM management
- Audio and Video Quality Tweaks
- Battery Efficiency Tweaks
- Performance Tweaks
- Steaming Tweaks
- Net Speed Tweak
- IPV4 and IPV6 Support
- 3G/4G Tweaks
- DNS Tweaks
- Gaming Tweaks
- Dalvik Virtual Machine Tweaks
- Responsiveness & Speed Tweaks
- Disable Loggers
- Disable Kernel Error Checking
- System Tweaks
- Google Camera Implementation

Init.d Tweaks:

- 01Ram_Optimize
- 02Zipalign
- 03Remount_Full_Ext4
- 04Net_Speed_Tweak
- 05Ext4_Lag_Fix
- 06System_Tweak
- 07Sqlite_Optimize
