

of all completed goals to the ones that resulted from all other channels. Network Referrals shows how visitors from social sources interact with your site grouped by social networks. Landing Pages tells you what content is shared and where. Conversions report provides a monetary value to the traffic generated from social networks. Another method of sharing is using social media plugins like the Facebook's famous 'like' button. The Plugins report provides data on this aspect. Again the User Flow report tells you how visitors navigate through your site.

Campaigns

In GA, you can see specific metrics to track the effectiveness of various marketing campaigns you are running. You have different reports available to see how paid keywords are faring compared to organic SEO driven keywords. The Cost Analysis report shows session, cost, and revenue performance data for your paid non-Google marketing channels. The report compares the cost of each campaign with its associated revenue (from ecommerce and/or goal value) to calculate ROAS (Return on Ad Spend) and RPC (Revenue per Click). You need to upload and import the associated cost data to run this analysis. For example, if you buy keywords on non-Google search engines, you can upload the cost and impression data from these search engines to Analytics.

Acquisition report is a very effective tool in tracking the flow of visitors and optimising your marketing channels to improve returns. **d**
