

Decorators and Generators

Moving on to some advanced functions types

By now you should have a good grip on functions and classes. But the function feature doesn't end there- that was only basics. Ready for the fun stuff?

Decorators

Decorators are also a type of function. Technically, they fall in two categories- Function decorators and Class decorators. A decorator in Python is any callable Python object that is used to modify a function or a class. To learn about decorators, you need to learn a few more concepts about functions.
