

after your manual deletion), depending on how you want to deal with it. Beautify or organize into an object with a GUI.

Speed reader

<https://bigl.es/friday-fun-speed-reading-with-python/>

Call it efficiency or laziness, not having to move your eyes while reading is definite way to increase the density of your reading comprehension. There are chrome extension to do this (check them out for research) ..but since we can, we should definitely build our own.

Read with speed - Fast and curious!

- **Step 1: Complete the first DIY project in this chapter.**

Seriously though, scraping is a great way to get a sizeable body of meaningfully dense text (or the opposite). If you're really determined to skip the scraping, you will need something to read, and a module to extract data from it (like pyPDF, or zipfile and lxml). By the end of this step you should be able to access your corpus of text as you want. This may include loops to get through a collection of files or live scrape text, and basically have it in a well organised dictionary. Alternately, you can use nltk to later add semantic searching to your corpus.

- **Step 2: Display word by word (while holding down spacebar)**

Here spacebar is a particular choice. Since it requires comparatively high concentration, and even a momentary distraction can result in a loss of
