

regular maintenance that your stock fans tend to fall short. Then there are some instances where the cooling is insufficient by design. Planned obsolescence anyone?

When your stock heatsink feels underpowered is when you should invest in custom coolers. Air-coolers are the safest option, however, All-in-One closed loop liquid coolers are also worth consideration. The former is usually cheaper than the latter. In the coming pages, you will learn the differences between the two and learn to use the right cooler for your needs. Also, if you're a bit of an enthusiast then we've got a section on custom cooling towards the end of this FastTrack. Let the fun begin. **d**
