

Radiator and fans on opposite sides

possible. The more common possibility is to have the radiator on the inside and the fans on the outside.

Custom liquid cooling loop

This is where the fun begins because there literally every top-end case in the market is built for custom liquid cooling. A thing to note here is that because this is “custom”, you can make do

with practically anything in the market because you can configure your cooling in the right manner. Even then, there are some metrics which still need to be considered while getting a case for your custom liquid cooling needs.

One of the things you want with a case that’s meant for liquid cooling is the ability to show-off your custom loop. This means, getting a clear window on one side. Then you need to finalise your liquid cooling loop com-
