

Cooling various components

It's not just the CPU and the GPU that need cooling. The other components in your PC could also benefit with lower temperatures.

Enthusiasts are a crazy bunch. The philosophy “just because I can” is quite commonly followed by the liquid cooling enthusiasts and as a result there now exist provisions to cool components that honestly don't need liquid cooling. We're obviously talking about liquid cooling blocks for components such as RAM, Hard drives, PSU and SSDs.
