

with regards to the heatsink tower also matters when there are more than one fan attached. The picture below should help make things clear.

Having two fans facing each other and throwing air towards each other is one of the silliest configurations you can use. The simple rule of the thumb here is to ensure that the direction of the air flow is the same for all fans that are lined up.

That's about it for CPU coolers. This should allow you to understand most reviews or marketing material found on brand websites. More of the concepts are the same for AIO coolers as well. However, since they are a class apart, let's take a closer look at them in the next chapter.
