

Maintaining your coolers

Install and forget isn't the philosophy that DIYers follow. Here's how you can maintain your coolers.

Third-party CPU coolers are inherently well-made, to the extent that most of them don't require frequent maintenance. Stock coolers on the other hand require cleaning once every 6-12 months based on how dirty the air is. We aren't talking about the more exotic coolers, those require regular maintenance but that's not to say that your average third-party CPU cooler shouldn't get some TLC (tender loving care) every now and then. Let's take a look at some of common issues that CPU coolers face and what you can do to remedy the same.
