Custom loop - Tubing

Giving your custom loop its unique design

In the previous chapter, we already explained the basics that you need to know before buying tubes for your custom loop. Both the types of tubing will have its advantages and disadvantages. While weighing out both the options, you should spend a good amount of time to finally arrive to a conclusion. Since the topic of tubing is so vast, we decided to dedicate an entire chapter to it. Whatever you choose, there are several more things you will have to explore. Things such as reading the measurements, type of material and how it's going to affect your loop, whether hard tubing is not worth the hassle, are things that might have crossed your mind. That's exactly what we'll be doing in this chapter. Consider this a primer on tubing in an open loop liquid cooling system.
