

through the entire process of making the aforementioned parts ready to be installed into a loop. Before that, you need to figure out what you're going to cool and how to build the loop. Yes, when you go custom, the complexities of building a loop increase with each additional component that you wish to cool. Worry not, we've got you covered in all aspects.

We honestly hope that you'll embark on your very own journey towards building your custom loop. If you do make one, please drop us an email on editor@digit.in and share your experiences. Make sure to send a photo of your creation as well!
