

Custom parts - Assembly

It's finally time to build your liquid cooling dream machine

By now you should have a basic idea of the custom open loop liquid cooling ecosystem. Of course, there's much more to learn about each and every part if you delve deeper into their working. The deeper you dig, the more you learn about the physics involved with the use of various chemicals and materials, and how their interaction affects the cooling. For your build, you could individually buy the necessary parts or go for custom cooling kit that provides all the parts in one package. We would recommend the latter since the total cost is usually lower and you won't miss out on any part. After you've acquired all the parts, tubing and accessories for your custom loop, it's time to start the assembly process.
