

bles. Don't worry, it isn't a chemical reaction of any sort. After looping for several times, the bubbles will be removed automatically. If you find bubbles in the tubes, give them slight nudges so that they flow out.

If you didn't come across leakage in your first attempt, you seriously deserve a pat on the back. Now you can take away the paper towels and assemble the rest of your system. Plug in the rest of the components and enjoy the full glory of your custom-designed open water loop liquid cooling system.
