

Customize your Unity workspace

The Layout of Views on your Unity interface are almost fully customisable. You can change the look and feel of the interface by click-dragging the Tab of a View of your choice. When you drop a Tab of any View in an existing window, that existing window will move sideways or upwards or downwards to make space for the incoming Tab. Alternatively, you could also choose to drop the Tab in any Dock Zone. This will mean that the View will open up in a new window altogether.

Another option available to those who like a little freedom (figuratively speaking) is the concept of floating windows. Tabs can be detached from their Main Editor Window and be arranged as floating Editor Windows. These windows can contain arrangements of Views and Tabs just like its parent - the Main Editor Window.

A custom Unity Workspace

Getting acquainted with Unity hotkeys

Hotkeys are a simple way of ensuring that you do not lose your sanity during what can sometimes be a gruelling or extremely complicated set of commands that you need to provide to get a simple task done. Unity
