

from the side and also slightly from above the scene. Alternatively, you can also click on the padlock located on the top right portion of the Scene Gizmo to enable or disable scene rotation. After disabling the scene rotation, you just need to right click the mouse to pan the view without rotation, which is the same as the Hand tool. It is to be noted that the Scene Gizmo won't be displayed in 2D mode. Hence, to experience the 2D mode, you should create the view in such a way that it looks perpendicular at the XY plane.

Working with Mac trackpad gestures

You can drag objects using two fingers to zoom the view if you are working with Mac. It is also possible to make use of three fingers to emulate the effect of the Scene Gizmo as if you are clicking on its arms. You need to drag up, left, down and right to overlay the Scene View Camera to the relevant direction.

If you are working with OS X 10.7 Lion, the trackpad settings should be changed to work with Scene Gizmo. You need to open System Preferences>Trackpad option. You can also manually enter trackpad into Spotlight. The next step is to select the option named "More Gestures" and select the first option named "Swipe between pages". You have to select any one of the options such as Swipe left or right with three fingers or Swipe with two or three fingers.

Understanding Scene View navigation

If you would like to work with the Scene View navigation using Unity, you would have to perform core operations such as moving, orbiting and zooming. To move around the various scenes, you should make use of the Arrow keys. The Up and Down arrows are used to move the Camera forward and backward according to the respective directions. If you want to pan the view sideways, you should use left and right arrows. It is possible to move faster around the Scene View by holding Shift key with an arrow.

If you select the Hand tool, you can move, orbit and zoom around the scene view effectively. You can also invoke the shortcut key Q to activate the Hand tool. To move, you should click on the Hand tool and drag the camera across various places.

The orbit looks like an eye shaped icon. You should hold the combination of Alt
