

key and right-click to orbit the camera around the active pivot point. You should note that this feature is not available in 2D mode because of the orthographic view.

To perform the Zooming operation, you should hold Alt and right-click to zoom the Scene View. If you are using Mac, you can press Control and left-click combo. The rate of movement and zooming can be easily increased by holding down the Shift key.

Flythrough mode

With Unity, you can work with the Flythrough mode to navigate the scene View. This mode is exclusively designed for Perspective Mode and won't be available in 2D mode. To work with the Flythrough mode, you should click and hold the right mouse button and move the view using the mouse. You can move using a wide range of keys such as left, right, forward and backward including Q and E for moving up and down. If you would like to move quickly, you need to hold down Shift key. If you are using Orthographic Mode, you should hold down the right mouse button to orbit the camera.

The same scene in perspective and orthographic mode.

Movement Shortcuts

You can navigate between the various objects on the Scene View even without selecting the transform tool from the Unity interface. The required dragging operation can be used with the help of the keyboard and mouse combination. In case of a 3-button mouse, you should use Alt+middle mouse button for moving objects. The Alt+Control+left-click combo should be used for dragging in case if you are working with a 2-button mouse.
