

To perform Orbit action with a 3-button and 2-button mouse respectively, you should select Alt and left-click and perform the required dragging operation. The zooming operation can be performed by holding Alt and right-click mouse key together. You can also make use of the scroll wheel in case if you are using a 3-button mouse.

If you are working with Unity on a Mac PC, you should use a combination of Alt+Command+left-click for moving objects. The Alt+Left-click should be used to orbit around the Scene View. To zoom, you just need to apply the swipe method using two-fingers to perform in and out operations. Alternatively, you can also hold Alt+Control+left-click shortcut and drag objects on the screen view.

Imagine you are playing with GameObject and would like to center the Scene View. You can do this by selecting the active GameObject and pressing F after moving the mouse over the Screen View. You will also be able to locate this option inside Edit>Frame Selected menu option. If you press Shift+F key, the relevant GameObject view will be locked irrespective of the movement. Moreover, you can locate this option by hovering around Edit>Lock View menu option.

Positioning GameObjects

Unity platform consists of GameObjects. To select a relevant GameObject, you should select it on the Scene View. You can also click on the GameObject name in the Hierarchy window. It is possible to select multiple GameObjects by holding the Shift key while clicking. You can also drag a rectangle surrounding multiple GameObjects to select them. You can recognize the selected GameObjects placed in the Scene View since they are highlighted in orange. You can customize the highlight parameters by navigating to Unity>Preferences>Color option. The GameObjects also display a Gizmo in the scene View if you have selected any of the Transform tools such as Move, Rotate, Scale, and RectTransform. The Gizmo is basically a graphic portion associated with a GameObject and are displayed in the Scene View. You can also create customized Gizmos with the help of textures or scripting.
