

Blue, Green, Yellow and Red that indicates deferred shading, lighting, forward rendering and vertex lit. The Overdraw mode is designed to render objects as transparent silhouettes. The Mipmaps displays the relevant texture sizes using various color codes. The Red color signifies that the texture is larger than the defined dimensions. The Blue code means that the texture could be of larger size than imagined. However, the colour and textures depends upon the resolution of the game being run.

The Deferred mode is used to view the elements of the G-buffer such as Albedo, Smoothness, Normal and Specular. The Unity API also provides several modes for the purpose of the Global Illumination system including two Material Validator modes such as Albedo and Metal Specular. You will be able to check whether your materials make use of the values within the suggested ranges.

The 2D menu option enables you to switch between 2D and 3D for the Scene view. The camera is placed with the X axis pointing right and the Y axis pointing towards the up in the 2D mode. The Lighting menu option activates and deactivates Scene view lighting. The audio effects can be enabled and disabled from the Scene view using Audio option on the Toolbar.

The Toolbar also provides an Effects button, which looks like a small mountain icon placed adjacent to the Audio option. The option includes four options such as Skybox, Fog, Flares and Animated Materials. You can also activate and deactivate all the effects using the Effects button.

The Gizmos menu provides several options using which you can control and manage objects, icons and gizmos. You will find the presence of Gizmos menu in both Scene and Game views. With the help of the Search box, you can easily fetch items included in the Scene view by providing their names or types.
