

The Project window

With the help of the Project Window, you can navigate and manage all the required assets relevant to your active project. The Project Window is divided into two sections. The left section displays the folder structure as a hierarchical list. If you select a folder from the left side, the relevant content will be shown in the right-hand side panel. The folders are marked with a small triangle using which you can expand or collapse the content. The Project window will also display nested folders. Alternatively, you can also hold ALT key to expand or collapse nested folders continuously.

The right-hand side displays the individual assets located inside the relevant folder upon selection from the left side panel. The assets are displayed

Understanding the Project window

as icons that depicts the type such as script, material and sub-folder and much more. You can resize the icons using the slider located at the bottom right hand side. If slider is moved to the extreme left side, the icons will be replaced by a hierarchical list view. The bottom portion of the Project Window also shows the currently selected item. You will view the full path if a search is carried out using the asset name.

The top left side also provides a Favorites section, where you can store frequently accessed assets. This module will be helpful if you have plenty of assets inside the project. You can store the items required by you on a daily basis and access it easily at any time. It is possible to drag items from the Project list to the Favourites including the ability to save search queries.

The breadcrumb on the Project window also shows the path of the active folder that is being viewed. You can directly click on the individual
