sub-folders to the currently active folder. The top right side provides an ability to search the assets available inside your current project.

You can view the Project window in one-column by selecting the One Column Layout option from the pop-up menu. The column won't display the icons but just includes a list of assets. You can also switch back to the default two-column view by selecting the option from the displayed menu. It is possible to freeze the active contents inside the Project window with the help of the lock icon.

Working with Searching

The Project window browser features a search module using which you can locate assets easily. The function will be useful if you are working on a large project. The results are returned in the form of assets based on the search query. The search will be narrowed if you provide more than one search term. For instance, if you provide ABC XYZ, then only those assets bearing ABC and XYZ are displayed.

You will view three buttons towards the right side of the search bar. The first button will help you to refine the search according to their type. If your search has returned 1000 assets, then you can filter for only those assets that are tagged under AudioClip. This will avoid valuable time required to locate for the specific audio clip.
