

side in the Inspector window. The name of the icon will be displayed near the icon. It is possible to assign the relevant icon to a Prefab. The intention of this method is that the icons will be applied to all instances of the active Prefab.

Modifying Script Select Icon button

You can assign a custom icon to a script by selecting the C# marked Select Icon button in the Inspector window. You will find the button on the left side of the script name and the assigned icon will be displayed in the Scene view.

The Select Icon menu will be displayed as a pop-up and you will be able to view a list of coloured label icons. You can also select the button captioned Other... to assign any image from within your project Assets. The Image icons are useful if the GameObjects doesn't provides a visual representation. After assigning an icon, you can move it from the Scene view. You can make use of any Asset image from your project as an icon.

Working with Icons using Unity Inspector

Editing Properties

The Unity framework comprises of components. You can modify the look and feel of the various components by modifying the Properties in the Inspector. The Properties are divided into references and values. While reference denote objects and assets, the values comprises of checkboxes, colors and numbers. You can assign References by dragging and dropping the relevant object or asset including the ability to use Object Picker. You have to provide a suitable value in the Inspector. The icon for activating the Object Picker can be located on the right side from within the Inspector.
