

The camera behaving as expected.

```

•     {
•         offset = transform.position - player.transform.
position;
•     }
•
•     void LateUpdate ()
•     {
•         transform.position = player.transform.position +
offset;
•     }
• }

```

The camera follows the rolling ball without rotating even as the ball goes over the edge. In the next assignment we will setup the basic play area and create and place our special pick-up objects. **d**
