

GameObjects

Creating and collecting PickUp objects

With everything that you have read about the Unity game engine by now, it should come as no surprise when we say that GameObjects are the most important concept in the Unity Editor. No GameObjects = No Games in the Unity engine.

Each and every object in your game is a GameObject - right from the characters that you have created who help take the story forward, down to the tiniest collectible items that you see in different scenes. Your camera, lights and special effects are also GameObjects. But these objects can do almost nothing on their own. They need to be attributed with properties to hold value to the game story. Once you attribute these properties, these GameObjects can become characters, the environment for your game or even a special effect.

This is where 'components' come into play. In order to give a GameObject the properties that it will need to become a light or a tree or a camera,
