

Displaying UI, scores and text

Counting, displaying text, and ending the game

The UI represents the way the gamer sees the screen. It contains all the additional elements in the game that are necessary, such as keeping scores, displaying relevant text messages etc. All of these functions and more are done through the various UI elements. You will now be using those elements to create some UI functions in this game.

The Player is moving and collecting objects. Unless they find a way to count the number of objects they're collecting, how would they end the game and figure out whether or not all the game objectives have been met with? This will be done in two steps. First you add a tool to
