

window. Below is a list of options that can be adjusted for the build. Common options are given in “Generic items across builds”.

PC, MAC & LINUX STANDALONE	
Option	Purpose
Target Platform	
Windows	Build for Windows
Mac OS X	Build for Mac
Linux	Build for Linux
Architecture	x86
x86	32-bit CPU
x86_64	64-bit CPU
Universal	All CPU devices
x86 + x86_64 (Universal)	All CPU devices for Linux
Copy PDB files	(Windows only) Include Microsoft program database (PDB) files in the built Standalone Player. PDB files contain application debugging information that is useful for debugging, but may increase the size of your Player. This setting is disabled by default.
Headless Mode	Build game for server use and with no visual elements
IOS	
Option	Purpose
Run in Xcode	Select the version of Xcode to use in the build. When set to Latest version, the build uses the most recent version of Xcode on your machine.
Run in Xcode as	
Release	Shipping version
Debug	Testing version
Symlink Unity libraries	Reference to the Unity libraries instead of copying them into the XCode project. (Reduces the XCode project size.)
