

## The allure of online festivals

Indian customers are probably going to spend very nearly 85% more on worldwide online commercial stores in 2018 across many item types, according to a Google study.

The report titled PayPal Cross-Border Consumer Research saw that, generally speaking, web-based spending in the nation (counting residential and cross-border) would touch ₹8,75,600 crore in 2018 from the estimated ₹4,92,500 crore in 2016.

In comparison, cross-border spending in 2016 remained at evaluated ₹42,400 crore, with just about 25% of the Indian customers professing to have shopped from sites in different nations over the most recent a year.

Stats for Buyers In India

While clothing, footwear and jewellery are the driving classifications in online festivals accounting for 54% of the purchasers spending on these items, customer gadgets stand second in the rundown, trailed by makeup and personal care. This rise in the quantity of online customers purchasing from different nations is driven by various reasons, with free delivery deciding the trend.

As per the report, just about 42% of online customers purchase from worldwide commercial stores on account of free delivery, while at the same time having the capacity to pay in local currencies is a near second motivation to shop online.

The report additionally mentioned that while the greater part of the aggregate online spends in 2016 was brought about by means of large screen gadgets (phones and laptops), the future will be dominated by personal assistants and smart TVs.

Web-based shopping through cell phones and tablets is evaluated to achieve ₹4,16,600 crore by 2018 from 2,03,600 crore in 2016.

And as always, e-commerce majors are experimenting like never before in attracting more consumers. Even aspects like haggling and price reconsiderations were the highlights this year in e-commerce.

Online shopping has till now largely been working on a fixed price model, albeit with lots of discounts thrown in. But to push the idea even further,
