

Amazon Assistant

Amazon Assistant is a browser add-on that, understandably, works only for the Amazon website. Amazon Assistant is very good for one singular purpose – and that is to make the most out of the lightning deals. What you have to do is go to the lightning deals page through the plugin itself, view the list of upcoming lightning deals, and select the ones that you are most interested in. When the deal goes live, you will get an alert on your desktop, so that you can quickly pick that item up. The plugin can also be configured to send an alert to your smartphone.

Amazon Assistant

To do this, you will need to have the Amazon app installed on your smartphone, have given permissions to the app for displaying smartphone alerts, and have signed into the Amazon account. Once all of this is done, all you need to do is to enter the email address of the same Amazon account through the Amazon Assistant extension. Amazon Assistant also has a wishlist, which can be used to track price changes for a particular item. Additionally, the plugin allows you to see a list of any ongoing deals, no matter which part of the internet you are on.

Fakespot

While this plugin is actually meant to allow shoppers to spot fake product listings, that aspect of the functionality of the plugin is not relevant to Indian buyers as it only works on one shopping portal – Amazon. However, Fakespot can be used for one very good function – it churns the data in all the reviews, and provides a rating for a particular product. This plugin
