

only one review, as against those who have written multiple reviews on the site. After that, you can see a rating trend. This is a graph of the ratings over time. If the ratings are more or less consistent, there is nothing to worry about. If there is a spike in high ratings at one point in time, you can bet that the seller has fed in a number of fake reviews in a short period of time.

After that, is a graph showing the number of people who have left behind reviews, but have unverified purchases. Again, an aggregated score of the reviews by the unverified purchasers is shown, next to an aggregated score of the reviewers with verified purchases. Then there is a word count comparison chart, that shows the average word count of reviews in the product category, against the word counts of the reviews of this particular product. If the word counts are more or less than the average, you know that something is off. The tool also checks for repeated phrases in the reviews, and reviewers who have a significant overlap in the products they have reviewed. If there are a lot of accounts, which have reviewed the same products, then Reviewmeta will tag that activity as something fishy. Then there is a score for brand repeaters, which lets you check for unnatural amounts of loyalty to a particular brand. This will let you weed out products that have only been purchased because of the brand name stuck on them. Finally, Reviewmeta checks for deleted reviews, and indicates the scores of these reviews. This is not done in real time through the site, but Reviewmeta checks the current reviews against previous scans to check the deleted reviews. Reviewmeta is the most powerful tool out there to analyse the reviews of a particular product. Unfortunately, Reviewmeta only works for Amazon, but there is a browser plugin available as well.

WikiBuy

Wikibuy is a crowd source plugin that is extremely good at doing one thing – finding an offer from alternative site. All you have to do is navigate to a particular product page on a website, and press the button of the extension. If there is another site with a better offer for the same product, the plugin instantly shows a direct link to the page on the top of the browser. The setup and use is very simple, and you do not need to sign up for an account to use this plugin. If nothing happens when you hit the button, do not worry, it means that you have found the lowest possible price, at that point of time. You can also directly search for a particular product from a search window that pops up when you click on the plugin. If, and only if the particular product has a coupon code that can be applied, then this coupon code will
