

WikiBuy

also show up on the product page on clicking the WikiBuy button. WikiBuy is a slightly buggy plugin, and the window for the plugin may not disappear after it is used at times. To solve this problem, simply refresh the page.

Price Tracker

Price Tracker is this amazing plugin that allows you to check the tall claims of shopping portals. For example, products may be advertised at a cheap discount, and always sold at the same price. Even though a sale may be ongoing, it might not be the lowest price point of that product in all time, and so may not be the best time to buy the product. If the price history of the product is a flat line, you know that there is no real discount being offered. If there has been a steeper price drop in the past, it is best to avoid getting the product at that point of time. At times, the price of the product may actually be more during the period of sale, than it was when there was no sale going on.

Price Tracker works on both Flipkart and Amazon. You have to install the plugin, log in, and verify the email address also for the plugin to work. However, once installed, you do not have to even click on the plugin. The price history of the products is displayed automatically within the page of the product itself on Amazon as well as Flipkart. The graphics used for each site varies a bit, but that is not really a concern. Ideally, the best way to use this plugin is to ensure that the product you are buying is at its cheapest price point ever. Towards the right of the area that displays the price history information is a number of controls. The one most relevant to the consumer
