

is the time period over which the price history is shown. By default, this is set to three months. Checking for the price history for the entire duration for which the product has been listed may provide more information. The sales rank option shows how popular the product was over a period of time. Here, you can check historical trends to see if the particular product has grown more or less popular over a period of time. The sales rank and periodicity control options are only available on Amazon, and not on Flipkart. On Amazon, you can also toggle the listing price, which is usually a straight bar well above the discounted price. Invariably, this shows that a product on discount has never been sold at the listing price.

Price Tracker

On Flipkart, Price Tracker also offers an autobuy option. This will automatically purchase a product in the eventuality of a flash sale. Mostly, the feature is available only for various models of smartphones. The caveat is that the autobuy option will check out the product and deliver it to your default address only, so you have to make sure it is configured correctly. The plugin also provides detailed walkthroughs and guides for flash sales, such as the pre-registration period, the time span over which one has to be prepared for the sale, what kind of information needs to be fed in, and the exact sequence of buttons to press to confirm the sale. In our experience,
