

this aspect of the plugin is particularly useful for buying stuff from Mi.com.

Avast Safeprice

Ever wandered into a new shopping portal and wondered if it is safe to shop at that particular site? There is an easy way to find out instead of messaging your friends. Avast Safeprice is an extension from security company Avast, and if the website is safe to shop on, then clicking on the extension will display that the site is trustworthy. At times, Avast will not show any information about the site at all, this indicates that the site has not been tagged

Avast Safeprice

as secure, but does not directly indicate that the site is untrustworthy. Still, in such a case, it is better to find the product on a better portal, as almost all popular sites in India are tagged as safe by the tool. Another good thing about the plugin is that it gives you offers related to the product that you are shopping. If you are buying a phone, and there is another phone available in a similar category with a cheaper discount, Avast Safeprice will alert you on the deal. And finally, one of the best things about Avast Safeprice is that it also shows you a number of coupon codes. This is one little plugin that does a lot of heavy lifting.

CouponDunia

CouponDunia is a website that offers virtual coupons for shopping across multiple websites. The two most useful websites for which coupons are available on CouponDuniya are Flipkart and Amazon, but coupons are also available for Myntra, Nykaa and FirstCry. There are also additional cash back offers and virtual scratch cards available if you opt for these offers through CouponDunia. The offers are arranged by discounts, as well as product categories for each site. You can either browse the discounts available for a particular site, or browse the discounts available for a particular product category. The offers are additionally categorised into coupons and deals. You have to navigate to the shopping portal through CouponDunia to avail the offers for the deals. For the coupon codes, you can just reveal
