

A little bit of knowledge in scripting languages for SDK and Swift is a must for those who would like to code their way through the entire experience. Or you could choose to stick to the user-friendly methods of modelling and applying effects as most would prefer to. Keep a close watch on the code and how it changes in the terminals to study it.

If you encounter any problems while creating objects, setting up environments or configuring setups, check the commandline to review the problems and see what can be done to fix it. Both environments are convenient for beginners since errors and mistakes are highlighted to be debugged.

Tune in to the future articles where we show you how to move on from the menial setups and apply some amazing concepts to the pre-rendered items to create a fully actualized object in VR. **d**
