

Setting up in ARCore

```
WorldPosition();
```

- `Vector3 cardPosition = infoCard.getWorldPosition();`
- `Vector3 direction = Vector3.subtract(cameraPosition, cardPosition);`
- `Quaternion lookRotation = Quaternion.`
`lookRotation(direction, Vector3.up());`
- `infoCard.setWorldRotation(lookRotation);`
- `}`

Add lights and appropriate ambience to the scene by using the Sceneform options and inputting the Sun Node:

- `Light spotLightYellow =`
- `Light.builder(this, Light.Type.FOCUSED_SPOTLIGHT)`
- `.setColor(new Color(android.graphics.Color.`
`YELLOW))`
- `.setShadowCastingEnabled(true)`
- `.build();`

Sample Scene Environment Setting

Finally, customise the visualisation of the plane so that the `PlaneRenderer` knows what part of the scene to render. At the same time, make any
