

Google ARCore Unity SDK

```

•         setSupportActionBar(toolbar)
•         fragment = supportFragmentManager.
findFragmentById(R.id.sceneform_ fragment) as ArFragment
•     }
•

```

Camera Setting Code for Build Setup

```

• void QuitOnConnectionErrors()
• {
•     if (Session.Status == SessionStatus.ErrorPermission-
NotGranted)
•     {
•         StartCoroutine(CodelabUtils.ToastAndExit(
•             "Camera permission is needed to run this
application.", 5));
•     }
•     else if (Session.Status.IsError())
•     {
•         // This covers a variety of errors. See refer-
ence for details
•         // https://developers.google.com/ar/reference/
unity/namespace/GoogleARCore
•         StartCoroutine(CodelabUtils.ToastAndExit(
•             "ARCore encountered a problem connecting.
Please restart the app.", 5));
•     }
• }
• }

```
