

- ``SCNPlane`` is vertically oriented in its local coordinate space, but
- ``ARImageAnchor`` assumes the image is horizontal in its local space, so
- rotate the plane to match.
- `*/`
- `planeNode.eulerAngles.x = -.pi / 2`
- `/*`
- Image anchors are not tracked after initial detection, so create an
- animation that limits the duration for which the plane visualization appears.
- `*/`
- `planeNode.runAction(self.imageHighlightAction)`
- `// Add the plane visualisation to the scene.`
- 
- `node.addChildNode(planeNode)`
- `}`

You will need to track the position and orientation of the image and which image is being referenced when setting the marker tags. This is
