

```
name"
• let plane = SCNPlane(width: referenceImage.physicalSize.width, height: referenceImage.physicalSize.height)
• let planeNode = SCNNode(geometry: plane)
• planeNode.opacity = 0.20
• planeNode.eulerAngles.x = -.pi / 2
• planeNode.runAction(imageHighlightAction)
• }
```

## Result Of Image Marking

And finally, overlay the 3D objects on the detected images which will appear in the device once the code has been built and executed:-

```
• node.addChildNode(planeNode)
• DispatchQueue.main.async {
• self.label.text = "Image detected: \"\$(imageName)\\""
• }
• let planeNode = self.getPlaneNode(withReferenceImage: imageAnchor.referenceImage)
• planeNode.opacity = 0.0
```
