

CLOUD MARKERS IN ARCODE

We begin adding cloud anchors in ARCode by first establishing a direct link between the camera and the device in question.

```

• <uses-permission android:name="android.permission.
CAMERA"/>
•
• <!-- Add the line below -->
• <uses-permission android:name="android.permission.
INTERNET"/>
•
• <meta-data android:name="com.google.ar.core"
android:value="required" />

```

Using cloud markers in ARCode
