

```

State.NONE;
• Anchor newAnchor = hit.createAnchor();
• setNewAnchor(newAnchor);
• private void checkUpdatedAnchor() {
•     // We'll fill this in later...
• }
•
• @Override
• public void onDrawFrame(GL10 gl) {
•     ...
•     TrackingState cameraTrackingState = camera.getTrack-
ingState();
•     checkUpdatedAnchor(); // Add this line.
•     ...
• }
• @GuardedBy("singleTapAnchorLock")
• private void setNewAnchor(@Nullable Anchor newAnchor)
{
•     ...
•     anchor = newAnchor;
•     appAnchorState = AppAnchorState.NONE; // Add this
line.
•     snackbarHelper.hide(this); // Add this line.
•     ...

```

The status of the Anchor is updated to make sure that any elements in the main environment are shared with all connected devices. A host connection is established and a shared window pops up to show how the object appears in other devices.

Results Of Anchor Marking Share Function

```

• }
• private void checkUpdatedAnchor() {
•     synchronized (singleTapAnchorLock) {
•         if (appAnchorState != AppAnchorState.HOSTING) {
•             return;
•         }
•         Anchor.CloudAnchorState cloudState = anchor.get-
CloudAnchorState();
•         if (cloudState.isError()) {

```
